

## **Exercise Web II:**

---

### **JavaScript Challenges (strings, arrays, and date/time)**

#### **Web II Lab | SE & IT Dept. – Level 3**

1. Check for Anagrams: Write a function that takes two strings as input and returns true if the two strings are anagrams (meaning they contain the same letters in a different order).
2. Slice an Array: Write a function that takes an array and two indices as input and returns a new array that contains the elements between the two indices.
3. Split a String into Words: Write a function that takes a string as input and returns an array of the words in that string.
4. Calculate the Age Based on a Date of Birth: Write a function that takes a date of birth as input and returns the age of the person as of today.
5. Check if a String is a Valid Email Address: Write a function that takes a string as input and returns true if the string is a valid email address.
6. Replace All Occurrences of a Substring in a String: Write a function that takes a string, a substring, and a replacement string as input, and returns the same string with all occurrences of the substring replaced with the replacement string.
7. Find the Second Smallest Value in an Array: Write a function that takes an array of numbers as input and returns the second smallest value in that array.
8. Find the Difference Between Two Arrays: Write a function that takes two arrays as input and returns an array that contains the elements that are in the first array but not in the second array.
9. Format a Time Duration: Write a function that takes a time duration (in seconds) as input and returns a formatted string in the format of "X hours, Y minutes, Z seconds".
10. Convert a String to CamelCase: Write a function that takes a string as input and returns the same string in CamelCase (meaning each word is capitalized except for the first word).

## The Solutions:

---

- **Check for Anagrams:**

```
function isAnagram(str1, str2) {  
    str1 = str1.toLowerCase().replace(/[^a-z]/g, '');  
    str2 = str2.toLowerCase().replace(/[^a-z]/g, '');  
  
    return str1.split('').sort().join('') ===  
    str2.split('').sort().join('');  
}
```

---

- **Slice an Array:**

```
function sliceArray(arr, start, end) {  
    return arr.slice(start, end);  
}
```

---

- **Split a String into Words:**

```
function splitString(str) {  
    str = str.trim().replace(/[^a-z\s]/ig, '');  
  
    return str.split(/\s+/);  
}
```

- 
- **Calculate the Age Based on a Date of Birth:**

```
function calculateAge(dob) {  
  dob = new Date(dob);  
  var ageDiffMs = Date.now() - dob.getTime();  
  var ageDate = new Date(ageDiffMs);  
  return Math.abs(ageDate.getUTCFullYear() - 1970);  
}
```

- 
- **Check if a String is a Valid Email Address:**

```
function isValidEmail(email) {  
  var regex = /^[^\s@]+@[^\s]+\.[^\s]+$/;  
  return regex.test(email);  
}
```

- 
- **Replace All Occurrences of a Substring in a String:**

```
function replaceAll(str, substr, replacement) {  
  return str.replace(new RegExp(substr, 'g'),  
    replacement);  
}
```

- **Find the Second Smallest Value in an Array:**

```
function findSecondSmallest(arr) {  
    return arr.sort()[1];  
}
```

---

- **Find the Difference Between Two Arrays:**

```
function arrayDifference(arr1, arr2) {  
    return arr1.filter(function(element) {  
        return arr2.indexOf(element) === -1;  
    });  
}
```

---

- **Format a Time Duration:**

```
function formatDuration(seconds) {  
    var hours = Math.floor(seconds / 3600);  
    seconds %= 3600;  
    var minutes = Math.floor(seconds / 60);  
    seconds %= 60;  
  
    var str = '';  
    if (hours > 0) {  
        str += hours + ' hours, ';  
    }  
    if (minutes > 0) {  
        str += minutes + ' minutes, ';  
    }  
    str += seconds + ' seconds';  
}
```

```
    return str;
}
```

---

- **Convert a String to CamelCase:**

```
function toCamelCase(str) {
    var words = str.split(/[s_-]+/);
    for (var i = 1; i < words.length; i++) {
        words[i] = words[i].charAt(0).toUpperCase() +
words[i].slice(1);
    }
    return words.join('');
}
```
